**Name:** Fine Particulate Matter (PM2.5) **Measure:** 10th Percentile **How Calculated:** Air samples collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specific time period. The results were then assigned to the appropriate NYC neighborhood and the 10th percentile identified. In NYCCAS, fine particulate matter is measured in units of micrograms per cubic meter of air. **Source(s):** New York City Community Air Survey **Year:** Summer 2009

**Name:** Fine Particulate Matter (PM2.5) **Measure:** Mean **How Calculated:** Air samples collected at specific

NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specified time period. The results were then assigned to the appropriate NYC neighborhood and averaged. In NYCCAS, fine particulate matter is measured in units of micrograms per cubic meter of air. **Source(s):** New York City Community Air Survey **Year:** Winter 2009
