Name: Sulfur Dioxide (SO2) **Measure:** Mean **How Calculated:** Data collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specified time period. The results were then smoothed using GIS, assigned to the appropriate NYC neighborhood, and averaged. The gaseous pollutants in NYCCAS are measured in units of parts per billion. **Source(s):** New York City Community Air Survey **Year:** Winter 2009

Name: Sulfur Dioxide (SO2) **Measure:** 10th Percentile **How Calculated:** Air samples collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specific time period. The results were then assigned to the appropriate NYC neighborhood and the 10th percentile identified. The gaseous pollutants in NYCCAS are measured in units of parts per billion. **Source(s):** New York City Community Air Survey **Year:** Winter 2009

Name: Sulfur Dioxide (SO2) **Measure:** 90th Percentile **How Calculated:** Air samples collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specific time period. The results were then assigned to the appropriate NYC neighborhood and the 90th percentile identified. The gaseous pollutants in NYCCAS are measured in units of parts per billion. **Source(s):** New York City Community Air Survey **Year:** Winter 2009
