Name: Elemental Carbon (EC) **Measure:** Mean **How Calculated:** Air samples collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specified time period. The results were then assigned to the appropriate NYC neighborhood and averaged. EC levels are estimated using a method that measures absorbance. **Source(s):** New York City Community Air Survey **Year:** Annual Average 2009

Name: Elemental Carbon (EC) **Measure:** 10th Percentile **How Calculated:** Air samples collected at specific NYCCAS monitoring sites along with information about emissions sources were incorporated into a statistical model that predicted pollutant concentrations at all locations in NYC for the specific time period. The results were then assigned to the appropriate NYC neighborhood, and the 10th percentile identified. EC levels are estimated using a method that measures absorbance. **Source(s):** New York City Community Air Survey **Year:** Annual Average 2009
